NammaSpace: Proof of Concept and Web Viewer Links

Team Matrix — Chepuri Dathatreya
IIT Techfest 2026, NammaSpace Challenge, Round 1

1. Links

All viewers open in any desktop browser. Nothing needs to be installed.

Table I
Project and viewer links

No.	Resource	Link
1	Project page, demo video, technical report, all scenes	`https://namma-space-documentation.pages.dev/`
2	Room viewer (best scene)	`https://namma-space.pages.dev/room/`
3	Hallway and Bedroom viewer	`https://namma-space.pages.dev/hallway/`
4	Early Bedroom viewer	`https://namma-space.pages.dev/bedroom/`
5	Code repository (public)	`https://github.com/chepuridathathreya/Namma-Space`

2. How to Roam

A guide dialog opens on the first visit to each scene. Click inside the scene, then use the controls in Table II. Walls and furniture block movement, using a collision grid built from the scan.

Table II
Viewer controls

Input	Action
W A S D or arrow keys	Walk
Mouse	Look around (click the scene first; Esc frees the cursor)
Shift, Space	Run, jump
R	Return to the door
1, 2	Splat view, mesh view (only scenes that have one)
M, N	Collision grid overlay, live map

Adding `?debug` to the address shows a performance panel. On a laptop with two GPUs, set the browser to use the high-performance GPU for the best frame rate. The viewer lowers its detail at start-up and says so if the frame rate is low.

3. Code Repository

https://github.com/chepuridathathreya/Namma-Space (public). Setup instructions are in the README. Sample data is in `test/sample_scene.zip`.
